PROFESSIONAL SUMMARY

Computer Science Engineering student and AI & Full-Stack Developer focused on backend and system engineering. Hands-on experience building REST APIs, event-driven workflows, AI/LLM applications, and multi-agent systems. Strong foundation in Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, and System Design, with experience taking systems from architecture through implementation.

EDUCATION

Parul University, B.Tech in Computer Science Engineering
CGPA: 8.23/10

Aug 2023 – Present

EXPERIENCE

AI & Full Stack Developer — Neuro Pragya Private Limited

Jun 2026 – Present

- Build AI-driven full-stack products end-to-end, contributing across system architecture, backend services, AI/ML pipelines, data workflows and production-oriented application features.
- Developed **BioMarker**, an AI/ML-powered medical decision-support system that converts raw patient data into validated, explainable risk predictions through an end-to-end ML workflow spanning data validation, anti-leakage safeguards, model evaluation and deployment.

Web Development Intern — ZHAGRAM Technologies

Dec 2025 – Feb 2026

- Developed and integrated responsive frontend components with backend REST APIs, contributing to end-to-end web application features.

PROJECTS

RailMind, AI-Powered Cognitive Railway Maintenance Platform

- Built a cognitive railway maintenance platform that unifies asset health, signal risk, maintenance history, and operational intelligence into a decision-support workflow, powered by a **7-agent** investigation pipeline for historical search, relationship analysis, risk propagation, and recommendation synthesis.
- Reduced signal-failure investigation from **4–8 hours to under 60 seconds** by automating multi-source analysis and decision synthesis across four intelligence layers: operational facts, relationship intelligence, semantic memory, and reasoning.

Tech Stack: Neo4j, Qdrant, PostgreSQL, Redis, LangGraph, Next.js, NestJS, Prisma

AidFlow, AI-Enhanced Welfare & Donation Management System

- Architected a transparent welfare platform spanning **6 user roles** and **21+ features** across donor, NGO, beneficiary, merchant, government, and administrative workflows, with automated eligibility assessment, beneficiary verification, and fraud-risk analysis.
- Designed traceable financial and governance workflows with asynchronous processing and tamper-evident auditability, enabling verifiable fund operations and transaction history across the platform.

Tech Stack: React, Node.js, Express.js, MongoDB, Redis, BullMQ, JWT, Solidity, Ethereum

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, SQL

Backend & Systems: Node.js, Express.js, NestJS, FastAPI, REST APIs, WebSockets, Redis

AI/ML: LLM Agents, LangGraph, RAG, scikit-learn, XGBoost, LightGBM, PyTorch, TensorFlow

Data & Frontend: MongoDB, PostgreSQL, MySQL, React, Next.js, Tailwind CSS

DevOps & Core CS: Git, Docker, Linux, DSA, OOP, DBMS, OS, Computer Networks, System Design

ACHIEVEMENTS

- **Winner** — Hack Node, BlockseBlock
- **Finalist** — East India Blockchain Summit 2.0, IIT Kharagpur
- **Finalist** — ET GENAI, Economic Times
- **Top 55 Ideas Nationwide** — MSME Idea Hackathon 5.0, Government of India
